

Clarification Request

Request from: Steve Karg (steve@karg.net)

Reference: "BTL Implementers Guide-17"

Background:

The DEVICE IMPLEMENTATION GUIDELINES V 0.17 say in 2.9 "Be prepared for large MAC addresses of at least 18 octets". It also states in 2.15 "Be prepared to handle MAC addresses of any size less than or equal to 7 bytes"

Question:

It seems that 2.9 is no longer valid (from what I hear from the IP-WG and from WN-WG) and conflicts with 2.15. Can 2.9 be removed from the guidelines?

Response:

The BTL-WG will make appropriate changes to these items in the next revision of the BTL Implementer's Guide.
