Actions necessitated: ☒ Checklist/Test Plan change, ☒ BTL Specified Tests change,
_____,
☐ SSPC Interpretation required, ☐ Implementation Guidelines change,

Date of BTL-WG Response: _____
☐ All actions necessitated have been completed

Background:**135.1-2009 test 9.21.1.4**

for test 9.21.1.4 two independent changes exist in addenda 135.1-2009g-16 and 135.1-2009i. Both addenda were declared final at the same time. In the development phase of testplan 9 the reference was first changed to point to the "g" addendum but for the final testplan the reference changed to the "i" addendum. The result is, that the important changes from 135.1-2009g are not referenced; the test is broken.

Question:

Should a BTL specified test be developed and referenced that combines the changes from both addenda?

(same problem applies to testplan 12 as well)

Response:

We will put in an addenda to BTL Specified Tests, tests that combines the changes to tests 9.21.1.1 through 9.21.1.4 from 135.1-2009 g-16 and 135.1-2009i-14.
