References: BTL Test Plan 9.0.final

Stage: ☒Request, ☐Listed, ☐Analysis, ☒Resolved

Actions necessitated: ☐Checklist/Test Plan change, ☐BTL Specified Tests change,
☐SSPC Interpretation required, ☐Implementation Guidelines change,

Date of BTL-WG Response: _____
☐All actions necessitated have been completed

Background:

Test 8.21.X3 from 135.1-2009i-19 is an A-side ReadRange test. The test specification clearly targets a TrendLog Object in the TD. Test 8.21.X3 from BTL Specified Tests-9.0 was modified by Michael Osborne and uses generic log, but the test in a substantially different form in 135.1-2009i-19 since in BTL Specified Tests-9.0, this test is written so as to allow the TD to monitor a conversation between the IUT and a reference server

In Test Plan 9.0 section 5.10.2 reference to the test 135.1-2009i-19 - 8.21.X3 appears among EventLog A-side tests as if the test could be applied to EventLog objects.

In section 7.1.4 in a similar manner, reference to the test 135.1-2009i-19 - 8.21.X3 appears to apply the test on Trend Log Multiple objects.

Question:

What should be changed to apply the intended test to support more logging objects?

Response:

The test concept in this test incorrectly restricts this test to Trend Log objects. This will be submitted to the SSPC-135 as an erratum. Use 135.1-2009i-19 version, replacing the words "Trend Log object" with "logging object" in the test concept.
