

Clarification Request

References: BTL Functionality Checklist

Background / Proposed Solution:

The IUT Checklist (derived from the BTL Checklist) does not contain the chapter numbers of the tests, so referencing is done only by names.

Proposal:

Add the chapter number to the reference name like shown below:

Analog Input Object		
	R	3.1.1 Base Requirements
	S	3.1.2 Supports writable Out_Of_Service properties

In case the group decides positive, MBS volunteers for adding the references to the checklist.

Response:

The BTL-WG is opposed to this because the sections are already in order and it would reduce the clarity of the checklist.
