Clarification Request

References: BTL Test Plan 20.0.1 chapter 8.13.2 test 8.24.3 / 8.24.6 / 8.24.7

Date of BTL-WG Response: September 22, 2022

Background: BTL Specified Tests-20.0.1_ final tests 8.24.3 and 8.24.6 and 8.24.2

1. RECEIVE DeviceCommunicationControl-Request,
    'Time Duration' = (any unsigned value > 0),
    'Enable/Disable' = ~~DISABLE~~, *DISABLE-INITIATION*
    'Password' = (a password of at least 5 characters) (a password of up to 20 characters)
2. TRANSMIT BACnet-SimpleACK-PDU

(Test 8.24.6 is similar to 8.24.3 but without password.)
(Test 8.24.2 is similar to 8.24.3 but with a password up to 20 characters)

Problem:
    All three tests are requesting the deprecated value DISABLE for the 'Enable/Disable' parameter.

Question:
    1. **Shall the tests be altered to a valid value for 'Enable/Disable' parameter?**
    2. **Is it allowed that a Rev_22 IUT (B-AWS) does not support the deprecated value DISABLE?**

Response:
    1. **Yes.**
    2. **Yes.**
