

Clarification Request

References: BTL Specified Tests-5.0.final test 13.X1.1, 13.X1.11, and 13.X1.12

Background / Proposed Solution:

Backup/Restore larger preparation times as specified in Addendum 135-2008n, require updated tests.

All tests performing a real backup from or restore to the device (though not the negative tests) needs at least an update.

Question:

Do we need to add more tests to check for the backup times and the new properties as well?

Response:

When the test package is updated to include functionality from Addendum 135-2008n, Backup & Restore sections will be evaluated and updated as needed.
