

Clarification Request

References: BTL - 7.3.2.8.2 Date Range Test

Background / Proposed Solution:

In BTL - 7.3.2.8.2 for 'Calendar Object' having Test Title: 'Date Range Test', it is observed that there is a minor typographical error in test steps of 'BTL Specified Tests-5.0.final.doc',

Test step 1 states:

1. (TRANSMIT TimeSynchronization-Request,
'Time' = (any day and time outside of the specified date range selected by the tester) |
TRANSMIT UTCTimeSynchronization-Request,
'Time' = (any day and time outside of the specified date range selected by the tester, take
Daylight_Savings_Status and UTC_Offset into account) |
MAKE (the local time = any day and time outside of the specified date range selected by the
tester))

Test step 4 states:

4. (TRANSMIT TimeSynchronization-Request,
'Time' = (any day and time inside the specified date range selected by the tester)) |
TRANSMIT UTCTimeSynchronization-Request,
'Time' = (any day and time outside the specified date range selected by the tester, take
Daylight_Savings_Status and UTC_Offset into account) |
MAKE (the local time = any day and time inside the specified date range selected by the
tester))

After looking at Test step 1 and Test step 4 regarding UTCTimeSynchronization-Request, we found same statement as:

'Time' = (any day and time outside the specified date range selected by the tester, take
Daylight_Savings_Status and UTC_Offset into account)

Actually, for Test step 4, it should be:

'Time' = (any day and time inside the specified date range selected by the tester, take
Daylight_Savings_Status and UTC_Offset into account)

Proposal:

Kindly confirm whether this test case can be modified to take care of this typographical error.

Response:

Yes.
