

Clarification Request

Reference: "BTL Implementers Guide-16", "BTL Checklist-3.0.final"

Background:

The Implementers Guide section 14.1 specifies that a non-BBMD must be able to register as a Foreign Device. This means that the device shall support the 'register-foreign-device' message.

Question:

Does this also imply that the device must support the 'distribute-broadcast-to-network' message?

Response:

Yes, 'distribute-broadcast-to-network' must be supported also.

Updated Response (2021-05-13):

“Yes, ‘distribute-broadcast-to network’ must be supported if the device is capable of generating broadcast BACnet messages.”
