

Clarification Request

References: BTL Test Plan-5.0.final section 7.5.2

Background / Proposed Solution:

In BTL Test Plan-5.0.final section 7.5.2 “Supports T-AVM-A” is a subsection of T-ATR-A, designated BTL-R in the checklist. For B-AWS applicants, T-AVM-A is itself a requirement, but for other Device Profiles, T-AVM-A is not required.

Within T-ATR-A, shouldn’t “Supports T-AVM-A” be BTL-S, at most? In “Trend Log Multiple Checklist v13.doc” that section of the test plan is stricken away entirely. Requiring that a claim of T-ATR-A requires implementation of DM-OCD-A of the Trend Log object type is quite a steep (and irrelevant) requirement.

Should the “Supports T-AVM-A” line item and requirement be stricken from BIBB T-ATR-A?

Response:

Yes.
