

Clarification Request

Date of BTL-WG Response: 2023-01-12

Background: BTL Test Plan-20.0.1 – Chapter 8.14.6 - Test 9.24.1.12

Test includes test steps:

1. MAKE (a condition that would normally cause the IUT to initiate requests)
2. CHECK (that the IUT is initiating requests)

.....

Problem:

Not all devices supporting the DCC and RD services can initiate requests.

Similar tests including “DISABLE-INITIATION” service (e.g., 9.24.1.6 or 9.24.1.7, 9.24.1.9, 9.24.1.10) and expecting the IUT to initiate a request include one of the following conditionality:

If the IUT cannot be made to initiate any service, this test shall be skipped.

Or

If the IUT does not initiate any services other than an I-Am in response to a Who-Is, then this test case shall be skipped.

(Depending on source: Test description 135-1 or BTL-Test Plan 20.0.1)

Question:

Shall the Test 9.24.1.12 in BTL Test Plan-20.0.1 chapter 8.14.6 be skipped if *the IUT cannot be made to initiate any service*.

Response:

Yes
