

## Clarification Request

**References:** BTL Specified Tests-16.1. Final

**Date of BTL-WG Response:** October 29, 2020

☒ All Actions Necessitated have been Completed

Background:

There are some testcases in Scheduling - Internal – B that require either multiple time/value pairs in a single exception schedule entry, or multiple exception schedule entries, neither of which is required by the BIBB.

**Problem:**

The testcases 135.1-2013 - 7.3.2.23.10.3.5 , 135.1-2013 - 7.3.2.23.10.3.6, 135.1-2013 - 7.3.2.23.10.3.7, 135.1-2013 - 7.3.2.23.10.3.10, 135.1-2013 - 7.3.2.23.10.3.11, are the testcases from Scheduling\_Internal -B where we require more than 1 special even entry or multiple time/value pairs in a single exception schedule entry to execute the tests.

**Questions:**

- If any device supports Scheduling\_Internal -B with only one special event, or only single time/value pair then can we skip these testcases?

**Response:**

**Yes. Any test that requires more than one special event or more than one time-value pair may be skipped if the IUT does not support such.**
